Summary

Computer Engineering graduate trained in **MERN full stack development** at AccioJob, with internship experience and hands-on delivery of a **production-grade AI-integrated web platform**. Strong foundation in **JavaScript (ES6+)**, **React**, **Node.js**, **REST APIs**, and **SQL/NoSQL databases** — comfortable across the full development cycle from architecture to deployment. Quick to learn new technologies, strong **DSA and problem-solving** instincts, with a mindset focused on building software that creates real business value.

Technical Skills

Frontend: React.js, Redux Toolkit, RTK Query, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Framer Motion

Backend : Node.js, Express.js, REST API Design, JWT Authentication, Zod, Helmet, CORS, Rate Limiting

Database: MongoDB (Mongoose), MySQL, SQL Queries, Schema Design, Indexing

AI & Tools: LLM API Integration, Multi-Provider AI Orchestration, Prompt Engineering, Health-Check Systems

Dev Tools : Git, GitHub, Postman, Vercel, Render, VS Code, Agile, CI/CD basics

Core CS : Data Structures & Algorithms (Intermediate), TypeScript (basics), Python, RBAC, MVC

Experience

Web Development Intern

Jan 2024 – Feb 2024

Cognifyz Technologies

- Built **responsive, interactive web pages** using HTML5, CSS3, and JavaScript — improved UI/UX performance and cross-device consistency across modules.
- Developed **reusable React.js components** with dynamic rendering and CRUD functionality — reduced repetitive UI code and improved reusability across the application.

AI–ML Virtual Intern

Jul 2024 – Sep 2024

Eduskills Foundation (AICTE)

- Completed structured training on **AI/ML fundamentals** including supervised learning and model evaluation — directly applied in building Kriya's multi-provider AI integration layer.

Projects

Kriya — Personalized AI Learning Platform | [Live](#) | [GitHub](#)

Jan 2025 – Present

- **Stack:** React.js · Redux Toolkit · Node.js · Express.js · MongoDB · REST APIs · Google Gemini · Groq · JWT · Vercel · Render
- **Problem:** Generic courses offer no personalization — built a **full-stack AI platform** generating a unique, role-specific learning roadmap per student based on their current skills and target role.
- Designed a **3-stage AI Curriculum Engine** — skill gap analyzer → 12–18 node dependency graph → personalization layer — reducing student onboarding confusion with a clear, structured learning path.
- Engineered a **fault-tolerant AI Router** (Gemini primary + Groq fallback) with health tracking and cooldown logic — AI features stay live even during provider outages, directly protecting user experience.
- Built an **AI Assignment Evaluator** scoring submissions 0–100 against acceptance criteria — cutting instructor review time with instant actionable feedback and plagiarism flagging.
- Implemented **dual-token auth** (Redux memory AccessToken + HttpOnly Refresh cookie) with silent RTK Query renewal — zero session interruptions; endpoints hardened with **Helmet, Zod, CORS, and Rate Limiting**.

Education

MET's Institute of Engineering, Nashik

2025

B.E. Computer Engineering

Late B.P. Patil Jr. College of Science

2021

Class 12 — HSC Board

Certifications

AccioJob MERN Full Stack Development

Present

JavaScript Certificate — IIT Bombay, Spoken Tutorial

Apr 2025

Google Cybersecurity Professional Certificate — Google / Coursera

Jul 2024
